

OIL & GAS

Application: sectioning valves for oil pipeline

SUPPLY: Power units for the control of the actuator and of the sectioning valves

CHARACTERISTICS OF THE SYSTEM:

- Stainless steel carpentry to avoid corrosion in hard environment conditions;
- No electrical components to avoid Atex standards components (use of pneumo-hydraulic pump and pneumatically operated directional control valve)
- Properly dimensioned accumulator to guarantee 3 emergency operations
- Flow control valves to ensure fast operations
- Suitability to a final destination with severe characteristics (high temperature and possibility of sand storms), ATEX environment and minimum maintenance of the skid.
